

JOB DESCRIPTION

Position: **Infrastructure Engineer/Civil Engineer**

About us:

MT Højgaard Vietnam is a subsidiary company of MT Højgaard A/S. MT Højgaard is one of the Nordic region's leading construction and civil engineering companies, with customers in Denmark and selected locations abroad. At MT Højgaard, we solve different types of tasks, but we are especially known for our large and complex building as well as infrastructure projects. We have been doing this for over 100 years. Today, we combine our practical knowledge with advanced technology and insist on collaboration based on dialogue, curiosity, courage and enthusiasm.

MT Højgaard is an ambitious company and workplace. We place high demands on our employees, but we also offer great opportunities for personal development, and we create the framework to help you make your mark on both the company and the projects we create together. We launch new civil engineering and construction projects throughout the year; ones that challenge our creativity and competencies. We combine 100 years of experience and craftsmanship with the latest digital tools; and we are proud to be the company that sets the agenda in digital construction in the industry. You will find that co-operation is the main point of everything we do. We believe that dialogue, respect and knowledge sharing are critical to our success and we know that strong co-operation with customers, colleagues and business partners is an ultimately way to get the best results.

Skill development: We believe that people have a natural interest in personal development and continuous improvement. Training our staff is an investment in our shared future. It is important to us that MT Højgaard is a workplace where our employees get plenty of responsibility and develop themselves both professionally and personally. With us, you can build your career working on many different types of projects and within several business areas. Along the way, we also place great importance on strengthening and developing your theoretical knowledge, so we offer courses and training that target your specific requirements.

Job Description:

We have immediate openings for infrastructure professionals with **expertise in BIM, bridge design and road design. If you are interested and** want to do your design work in the newest 3D software and want to work during pre-construction and construction phase of commercial infrastructure projects, please read on!

The correct candidate will be a part of developing this BIM-supported area within our company.

The position will include:

- Using BIM/VDC design software to implement various tasks:
 - Road and bridge design
 - Site grading and earthworks design
 - Soil Calculations
 - BOQs
 - Visualizations
- Focus on personal development within infrastructure disciplines and enhance personal skills.
- Cooperate with project team internally and externally to facilitate efficient project processes for the best result.
- A passion for project delivery, people, customer service and your work.

- Delegate and review design in collaboration with other disciplines

Job requirements

We are looking for a flexible, detail-oriented team player with the ability to manage multiple tasks, produce quality work, and consistently meet deadlines. The successful candidate will possess:

- Engineering degree with focus and passion on Infrastructure.
- Experience and/or interest in BIM and using modern technology to optimize working processes.
- 3-5 years of experience working with relevant discipline.
- Passion for Infrastructure and willing to learn and use new software is a Must.
- Experience with Microstation/Bentley software will be an advantage.

Other Requirements

- You are an open-minded person interested in development and optimization of your daily work.
- Ability to work independently with minimal supervision and effective participation in team environment
- Ability to identify and resolve complex issues.
- A strong work ethic and a can-do attitude.
- Good written and verbal English communication skills (proficiency for project coordination with our colleagues in Denmark and our external clients)

Benefits

- You will have the chance to work in a professional working environment, doing jobs in many fields of civil construction.
- You have opportunities to improve your skills by having training in work as well as your ability in project management.
- Other benefits according to company agreement will be discussed during the interview.
